Summary

Motivated Information Technology student with strong skills in Java, Android Development, Firebase, and Web Technologies, with experience in building scalable applications and backend systems. Passionate about software development, problem solving, and creating efficient real-world solutions while continuously enhancing technical expertise.

Education

Government Polytechnic Chh. Sambhajinagar

Diploma in Computer Science Engineering

Aug. 2021 – May 2024

Chh. Sambhajinagar, Maharashtra

SGGSIE&T Nanded

Bachelor of Technology in Information Technology

Aug. 2024 – May 2027

Nanded, Maharashtra

Relevant Coursework

- Data Structures and Algorithms
- Blockchain
- Computer Networks
- Operating System
- Database Management System
- Systems Design

Experience

Mountreach Solutions PVT LTD

Android Developer Intern

September 2023 – December 2023

Remote

- Developed Android applications using Java following MVC architecture, implementing user authentication, input validation, and business logic.
- Integrated Firebase Authentication, Realtime Database, and Cloud Storage to design backend data flow, CRUD operations, and secure data management.
- Used Git and GitHub for version control, branch management, and collaborative software development workflows.

CodeNova Tech Solutions

Java Developer Intern

January 2026 – April 2026

Remote

- Constructed Java-based backend services and server-side applications following clean architecture principles.
- Designed and implemented RESTful API endpoints using GET, POST, PUT, and DELETE methods to perform CRUD operations and enable efficient client-server communication.
- Applied backend business logic including request handling, input validation, exception handling, and error management.

Projects

Virtual Server | *Java, Android, XML*

February 2024

- Enabled secure SSH access to Ubuntu servers for remote server administration from Android devices.
- Built file upload and download modules for reliable large file transfers between Android and Linux servers.
- Integrated power management features including Wake-on-LAN and Sleep Mode to optimize system energy efficiency.

MoveX | *Java, Kafka, Redis, Android*

May 2026

- Developed a scalable microservices-based ride booking application using Apache Kafka for real-time driver location streaming, ride matching, ride requests, and ride lifecycle management.
- Integrated Redis caching and WebSocket-based real-time notifications to optimize nearest driver lookup and provide instant ride status updates to riders and drivers.
- Designed fault-tolerant and horizontally scalable backend services with Kafka and idempotent event processing.

Technical Skills

Languages: Java, C, C++, SQL, Python, JavaScript

Frontend: HTML, CSS, XML, React

Backend: Firebase Authentication, Realtime Database, Cloud Storage

Frameworks & Technologies: Spring Boot, Linux, Git, GitHub, Postman

Machine Learning: Numpy, Pandas, Matplotlib, Seaborn, Scikit Learn, Tensorflow

Leadership / Extracurricular

Hackit

Vice President

2025–2026

SGGSIE&T

- Organized and executed technical competitions and events under the club, fostering a culture of innovation.
